Identity Threat Detection & Response (ITDR) Product

Datasheet

Overview:

Continuous Monitoring for Identity Threats:
ITDR is a robust solution that continuously monitors identity threats and vulnerabilities across the enterprise identity landscape. It addresses Identity Posture Risks, Account TakeOver, Insider Threats, and Privileged Access Abuse, providing insights and analytics to empower decision workflows.

Key Features:

1. Comprehensive Visibility and Inventory:
Gain a comprehensive view and inventory of the enterprise identity population across Identity Providers (IDPs) and local identities (non-federated).

2. Identity Posture and Device Risks:
Assess Identity Posture Risks and associated device risks linked to user accounts.

3. Real-time Monitoring of User Accounts and Activity:
Continuous, real-time monitoring of user accounts and activity to detect and respond to potential threats promptly.

4. Automated Threat Detection:
Automated detection of various identity threats, including Account TakeOver, Insider Threats, Privilege Escalation, and Lateral Movement.

5. Authorization Graph:
Unravel intricate pathways of identity entitlements, revealing how identities access critical data resources and applications.

6. Access Posture Risks:
Identify and mitigate Dormant, Excessive, Over-privileged, Sensitive, and Third-Party Access risks.

7. Application Risks:
Analyze risky identities and their access to applications, ensuring a secure application landscape.

8. User Behavior and Identity Analytics:
Leverage advanced analytics to understand user behavior, enhancing the overall identity security posture.

# Benefits

Proactive Threat Detection
Detect and respond to identity threats in real-time, preventing potential security incidents.

Comprehensive Risk Analysis
Analyze risks associated with identity posture, access, and application usage.

Prioritized Decision Workflows
Generate insights, recommendations, and analytics to facilitate decision workflows for prioritization, investigation, remediation, and governance of identity threats.
Conclusion:

Empower your organizations security posture with ITDR – a comprehensive solution for continuous monitoring, detection, and response to identity threats across the enterprise.
